

Meet Stanley, Berkeley Humane's First Beneficiary of the New Digital Radiograph Machine!

In late January this year, Berkeley Humane met Stanley at Berkeley's city shelter, Berkeley Animal Care Services (BACS). Stanley was a young, lively and energetic Pit Bull Terrier mix who despite his severe hip injury, still had a spark and love for life and the people around him. **Due to his injury, Stanley and BACS were in need of a special partner organization able to take Stanley in, determine the extent of his injury, and provide the treatment necessary** so Stanley can eventually get adopted and live a happy, fulfilled life surrounded by caring guardians.

With a new—and extremely expensive, \$50,000—digital radiograph machine on its way to Berkeley Humane's private shelter hospital, **Berkeley Humane was able to rescue Stanley, knowing we'll be able to help him and meet his needs.** After two weeks of treatment, crate rest, and plenty of meaty bones to keep him entertained, Stanley is now on the mend! Better yet, Stanley is ready for adoption and very eager to show his new family his no-longer-fractured hip!

Berkeley Humane is able to give second chances to animals like Stanley—whose alternative fate may be euthanasia—thanks to the generosity of Nancy and Richard Robbins from Wareham Development, Lawrence Berkeley National Laboratory, and Berkeley Humane's long-time supporter Katherine Burr, who collectively donated the much-needed digital radiograph machine.
